# ArmorerLink™ Firearm Management Software

ArmorerLink™ Firearm Management Software (FMS) for the tracking, training and maintenance of firearms and equipment allows you to securely connect and collaborate with your entire agency from anywhere in the world using the Internet. ArmorerLink™ FMS includes offline applications, allowing users to utilize ArmorerLink™ FMS in areas where Wi-Fi, satellite or cellular connections are not available. Security is critical, and for this reason, we've partnered with Rackspace® to host the software and backup your encrypted data. To help ease the transition of implementing and sustaining ArmorerLink™ FMS at your agency, we offer built-in training video tutorials for the entire application, as well as 24/7/365 world-class technical support. If you wish, we also offer optional software training at our corporate office in Hillsboro, Oregon, United States.

*(Optional) ArmorerLink™ Technology Group*

Using ArmorerLink™ FMS is intuitive. Simply log onto ArmorerLink™ using a smart phone, tablet, or PC and a web browser. You may opt for the ArmorerLink™ Technology Group, a carefully selected group of commercial grade hardware components designed to work in shop environments to minimize data entry errors and organize inventory. With ArmorerLink™ FMS your agency firearms are accounted for and preventive maintenance is automatically tracked and scheduled. Firearm qualification scores and training are captured and updated in real time. In addition, alerts are automatically sent for expired certifications and firearms due for replacement. These are just some of the key features ArmorerLink™ FMS performs automatically and seamlessly.
